Drug to Food	✓
Drug to Gene	✓

Platforms:

Mobile: iOS & Android

Check Medications: Immediately check and report on potentially harmful or even adverse drug reactions, check prescriptions and/or over the counter (OTC) purchase.

Medication Management: Easily manage all of your prescribed and over the counter medications.

Reports – Self-directed & Portable: Create & send personalized test results & healthcare reports to your physicians, family members, caretakers, & pharmacist prior to prescribing or purchase.

Medical History: Powerful healthcare management system to track medical conditions, illnesses, allergies and all medications.

DNA-Based Personalized Medicine: Advanced DNA pharmacogenetics (PGX) testing and Pharm-D proprietary database.

Automatic Updates: No need to take the PGx test again. Our system and App are automatically updated as new scientific/medical research findings are reported.

Lifestyle: Notifies you of certain lifestyles and dietary choices and warns of potential interactions and interferences with medications tied to foods.

Big Data: Real-time analytics across the largest and most accredited healthcare databases constantly evolving from medical advancements, research, and studies conducted by leading healthcare experts.

The Science of Living... Healthier, Safer & Better

Imagine the power to safely check both prescribed and over the counter drugs based on your DNA & personal health profile.

The ability to protect against life-threatening adverse drug reactions and discover safer and more effective medication.

The access to instantly precheck meds against your prescriptions, genes, health, allergies, & lifestyle.

The foresight of predictive medical management delivering a higher level of personalized care.

The mastery of proprietary testing & research revealing the best medication every time
